Field ID Mobile 1.17

Highlights

16 New features were added this release

16 Improvements were implemented

27 Bugs were fixed

Release Date: March 14th, 2010

We are pleased to introduce Version 2010.3 of Field ID Web and 1.18 of Field ID Mobile.

Below you will read about the major improvements that we have made to Field ID in this release. For an overview of all features please be sure to watch our recorded Webinar.

Overview of New Features in Field ID Web 2010.3

✓ Customer Importer / Exporter

Field ID now has the capability to import and export customer information. We support Excel (XLS) and Comma Separated Values (CSV) file formats. You can import new customers, export your existing customers and update customer information through the importer.

For detailed information please see -

https://www.fieldid.com/fieldid_help/index.html?Import_and_Export_Data.html

✓ Auto-Attributes Importer / Exporter

Field ID now has the capability to import and export your auto attributes in Excel (XLS) and Comma Separated Values (CSV) file formats. You can now import brand new auto attributes, export your current ones, and update the auto attributes with the importer.

For detailed information please see -

https://www.fieldid.com/fieldid_help/index.html?Import_and_Export_Data.html

✓ PDF Report Enhancements

PDF Certificate and Reports now have the ability to show more information. Product Images, Warnings and Images can now be included along with any images that were taken during the inspection. If you would like more information on having any of these included in your certificate please contact us.

✓ **Email Notifications on the Safety Network**

When using the Field ID Safety Network you will now get an email notification when you receive a request to connect and when someone has accepted your connection.

✓ **Email Notifications on Overdue Events**

When you setup an Email Notification in Field ID you will now have the option of receiving alerts on events that are overdue. You can now create an alert that contains upcoming, overdue or both events.

Overview of New Features in Field ID Mobile 1.18

✓ **Huge Speed Increase**

We have implemented a new design on the mobile which has increased the overall speed by almost 30%. This is our largest speed increase yet and everyone will notice an improvement.

✓ **Required Fields are now marked**

On the identify screen you now see which fields are required. The required fields will be marked with an (*).

✓ **New Identify Layout**

We have been standardizing the layout of our screens and have re-done the identify layout. You will now see a much cleaner and easier to read layout making it quicker to identify an asset.

✓ **Detach Sub-Components**

When you start an inspection on an asset that has sub-components you will now be able to detach the component during the inspection.

✓ **New Schedule Functionality**

When you view the Schedule Tab you will be presented with many new options. You can now start a scheduled event, edit the schedule and create a new one. This will allow you to schedule events based on the outcome of the previous event. For example, you can now schedule a repair after a visual inspection.
