

What's New in Field ID 2010.2

compatible with:

Field ID Mobile 1.17

Field ID Mobile 1.16

Highlights

34 New features were added this release

23 Improvements were implemented

26 Bugs were fixed

Release Date: February 14th, 2010

We are pleased to introduce Version 2010.2 of Field ID Web and 1.17 of Field ID Mobile.

Below you will read about the major improvements that we have made to Field ID in this release. For an overview of all features please be sure to watch our recorded Webinar.

Overview of New Features in Field ID Web 2010.2

✓ New Icons

We have updated all of the icons in Field ID to a more polished and professional look. Based on customer feedback we selected icons that are more intuitive for the associated action.

✓ Administration is now called Setup

For those of you who have the administration permission you will notice that the icon has been renamed from Administration to Setup. You will still find all of the same functionality under Setup.

✓ Save and Inspect from Edit

A workflow improvement we made is when you are editing an asset in Field ID you will see a button to save your changes and immediately start an inspection. This will greatly speed up starting an inspection after you have edited an asset.

✓ Quick Setup Wizard

When the default administrator logs into Field ID for the first time, they will be presented with a Quick Setup Wizard. This will walk them through the process of getting their account setup. In this process they will be able to configure Field ID to match their company and import product and inspection templates. For existing accounts if you are the Default Administrator you will see a link on your Dashboard to start the wizard.

✓ **Product Images, Warnings and Instructions are now sharable over the Safety Network**

Your product images, warnings and instructions are now visible over the Field ID Safety Network. When you publish an asset or view an asset over the Safety Network you will now see this information shared.

✓ **Improved Context Searching**

In the last release we added the ability to search for assets in your Vendor's Account (context searching). We have improved the context searching and added the ability to set your company or a vendor connection as the default account to search in.

✓ **Quick Register an Asset over the Safety Network**

When you are viewing an asset that has been assigned to you by a vendor, you will now have the option to quick register it into your own account. By quick registering an asset you will then be able to enter your own information about the asset and perform inspections.

Overview of New Features in Field ID Mobile 1.17

✓ **Load Data is now Sync**

Load Data has been renamed to Sync. Under Sync you can, download your setup data, load customers or job sites and jobs.

✓ **New Icons**

The same new icons that are on Field ID Web are also on Field ID Mobile keeping the interface consistent between them.

✓ **Improved Asset Search**

On the asset search screen we have made some improvements. All links are now at the bottom which creates a cleaner display of the results. As well when you click View to see the Asset information you can start an inspection without having to go back to the search results.

✓ **View Asset Information during an Inspection**

When you start an inspection on an asset that has sub-components you will now be able to view the component information during the inspection. This is the first step in a list of improvements that will be released in the coming months.

✓ **View Previous Inspection**

On the mobile you can now view the last inspection that was completed. When you search for an asset and are viewing the information you will see an Events tab. If you click on this you will see a view link beside the previous inspection. Clicking this will show you the results of this inspection.

✓ **Edit Functionality open to End Users**

Just like on Field ID Web when an end user looks up an asset on the mobile they will now be able to update selected fields. This includes division, location, purchase order and reference number. This will ensure that you have the most up-to-date information about where the asset is when its due for re-certification or inspection.

✓ **Better default screens for Events and Schedules**

The Events and Schedules screen will tell you if there are not any completed or scheduled events for the asset.

✓ **New Field ID Mobile Installer**

We have created a new Field ID Installer. When you get new handheld devices this will install all software (Field ID and the Wedge) and automatically download the latest version of all software. The new installer will greatly simplify getting new handhelds up and running.

✓ **Field ID Mobile + Field ID Wedge**

We have integrated the popular Wedge program into Field ID. With Field ID Wedge your handheld device can scan RFID tags to your desktop effectively turning it into a desktop reader. To launch the Wedge go to menu from the main screen and select Wedge.
