

What's New in Field ID 2009.5

compatible with:

- ✓ **Field ID Mobile 1.12**
- ✓ Field ID Mobile 1.11

NEW

Release Date: July 12th, 2009

N4 Systems is pleased to introduce Version 2009.5 of Field ID Web and 1.12 of Field ID Mobile.

This release focuses on major Field ID Mobile improvements. Providing the ability to search for your assets, integrated Smart Search, new data syncing process and multiple workflow improvements provide a much more efficient and streamlined mobile experience. On Field ID Web we have introduced better navigation through a secondary level of links which will place all available tasks and operations in one consistent area.

Below you will read about the major improvements that we have made to Field ID in this release. For an overview of all features please be sure to join or watch our recorded Webinar.

Overview of New Features in Field ID Web 2009.5

✓ New Second Level Navigation Menu

We are very excited to introduce more comprehensive navigation for Field ID. Over the last 2 months we have analyzed all of the features in Field ID and talked with numerous customers to continue usability improvements. The result of this is a second level navigation on each page where all actions that can be completed are grouped together.

For example, on the Asset Information screen you will now see a number of tabs that will take you directly to “Edit”, “Inspections” and “Schedules”. On the right hand side you will always find the “Add” link which will allow you to create new data in Field ID.

✓ Multi-Add Assets

Adding multiple assets to Field ID has never been easier. From the Identify screen look for the “Multi Add” tab which will walk you through adding between 2 and 250 assets at once.

You simply specify the asset type and attributes, quantity, the serial number format (range, non-serialized, Batch / Lot, Manual) and any other identifiers such as RFID or Reference Number. After you preview the serial, RFID and Reference Numbers to be generated, you click “Save and Create” the specified number of assets will be created.

✓ End Users Can Now Update More Information on their Assets

For those of you who do 3rd Party Inspections when your End Users login to Field ID to track and manage their assets they can now update more information on each asset. This will help ensure you have accurate information on the asset location when it's time to complete an inspection. End Users can now update:

- Division
- Location
- Reference Number
- Purchase Order Number

✓ Upgraded Smart Search

The Field ID Smart Search has been upgraded to now include the Customer Reference Number. Now in addition to a Serial or RFID number you can enter a Customer Reference Number to quickly view asset information and the event history.

✓ Smart Search on Every Page

We have integrated the popular Field ID Smart Search on every page in Field ID. Finding your assets by Serial, RFID or Customer Reference number is only a click away.

✓ New My Account Screen

To follow the new layout in Field ID the My Account screen has been separated into five different actions. When you click on My Account you will see 5 tabs - "Details", "Saved Reports", "Notification Settings", "Change Password", "Security Card". This new layout provides a cleaner and more efficient use of the screen. As more features are added to Field ID you will always be able to find them quickly with the new tabs.

✓ Manage your System Settings (administrator only)

Under Administration you will find a new section, "Mange System Settings". This page will show you the details about your Field ID Account including:

- Company ID
- Company Name
- Branded Login URL
- Embedded Login Code – place the Field ID Login on your website!

As well you are now able to upload your System Logo – the logo that appears in the top left hand corner of your account. You can enter your website address and a link will appear on the 'Go To' section of the Field ID Home page allowing your customers to quickly return to your website.

Overview of New Features in Field ID Mobile 1.12

✓ Asset Search

The biggest feature of this release is the ability to search for assets. On the Home Screen you will now see the Assets icon. Click on this icon and you will be presented with a search screen which will allow you to search for assets by:

- Serial Number
- RFID Number
- Order Number
- PO Number
- Reference Number
- Location
- Product Status
- Customer
- Division
- Product Type

The results screen will show you vital asset information and two links – Inspect and Edit allowing you to quickly start an inspection or edit the asset.

This feature will help you find assets in the field as well as knowing what information is loaded on your mobile computer.

✓ Simplified Setup Process

We have completely re-written how you setup and keep your mobile computer updated. Each time you login while connected to the Internet Field ID Mobile will check to see if any of your setup data (asset types, inspection types, customers) have been modified. If they have you will receive a message saying that your setup data appears to be out of date. Click “Yes” and all modified setup data will be synced.

If you would like to manually check to see if everything is up to date you can click on Load Data and then select the Setup Data tab. If anything is out of date you can click the “Update Setup Data” button otherwise it will tell you everything is up to date. No longer will you have to select multiple boxes – Field ID knows what information needs to be updated.

✓ Upgraded Smart Search

The Field ID Smart Search has been upgraded to now include the Reference Number. Now in addition to a Serial or RFID number you can now find an asset by Customer Reference Number.

✓ Integrated Smart Search

We have integrated the popular Field ID Smart Search on every page in Field ID Mobile where you look up assets. Finding your assets by Serial, RFID or Customer Reference number is now quicker than ever.

✓ Workflow Improvements

We have implemented a number of workflow improvements based directly on customer feedback. These include:

- From the Inspection Screen when you look up an asset you can now quickly Edit the asset by clicking on “Product Info” link and then click on “Edit”.
- After you have identified a new asset you will have the option to start a new inspection as soon as the asset has been saved. This will save you from having to look up the asset after it has been created.

✓ Date & Time on Home Screen

To help ensure the Date and Time is set correctly on your events we now display the Date and Time on the Home Screen when you login. If it's incorrect make sure you change it so your inspections have the proper date and time recorded.

✓ Updated Reporting Screen

The reporting screen will now show you the total number of assets and inspections that are currently loaded on the mobile. This is useful to see that all information you have selected to load has successfully been downloaded.

✓ Warning Message for Incomplete Inspections

If you are performing an inspection that has sub-components that have not been inspected you will receive a warning message indicating that some sub-components have been skipped. This will help ensure that all necessary components are inspected and nothing is missed.

✓ Improvements to recording Observations

When recording observations during an event the keyboard will no longer cover up the text area that is being typed into. If there are a large number of pre-configured observations the screen will now scroll allowing you to see all of them.
