What's New in Field ID 2010.1

compatible with:

- ✔ **Field ID Mobile 1.16**   **NEW**
- ✔ **Field ID Mobile 1.15**

Highlights

- ✔ **24** New features were added this release
- ✔ **11** Improvements were implemented
- ✔ **31** Bugs were fixed

Release Date: January 10th ,2010

It's the new year and time for the next release of Field ID. N4 Systems is pleased to introduce Version 2010.1 of Field ID Web and 1.16 of Field ID Mobile.

Below you will read about the major improvements that we have made to Field ID in this release. For an overview of all features please be sure to watch our recorded Webinar.

Overview of New Features in Field ID Web 2010.1

√ Upgrade your Field ID Account

Field ID now supports the upgrading of your account. Within Field ID by going to Administration then Manage System Settings you will see various upgrade options.

If you would like to upgrade your account click on the 'Upgrade My Plan' link. This will allow you to select a new plan.

If you would like to add more employee users to your account click 'I want to more Employee Accounts'. You will be able to specify the additional employees you would like to add.

For both of these options you can pay by the credit card that is on file with us. If we do not have a credit card then you can enter a new credit card or a P.O. Number.

√ Copy Inspection Types

If you would like to re-use any of your existing inspection types Field ID now provides you the ability to copy inspection types. From the Manage Inspection Types link under Administration you will see a new 'Copy' link. Click it and the exact same inspection will appear in your list of all inspection types. You can then edit the inspection type if needed.

√ **Mass Update Product Status on Reporting**

We now provide the ability to mass update the product status on the reporting screen. This way you can search for inspections that match a certain criteria and mass update the status of the products. Look for it under the Mass Update link on the Reporting Results screen.

√ **Auto-Accept Connections on Safety Network**

In the Safety Network there is a new setting that will allow you to auto-accept any new connection request. Anytime a new connection request is made to your company by another company using Field ID you will not have to accept them – it will automatically add them as a connection.

√ **Search for Assets in your Vendors Account**

Extending the Safety Network we are releasing the first version of searching in a vendors account for assets.

In many cases you may receive an asset from a manufacturer and would like to find out more information on it. If you are connected with that company you can now switch where your Smart Search will look. By switching your search to a connections account you will be able to view all important safety information about a specific asset.

This feature will be improved and expanded in the coming months as will the entire Safety Network.

Overview of New Features in Field ID Mobile 1.16

√ **Smart Search on Home Screen**

On the home screen when you login to Field ID Mobile you will now see the popular Smart Search box. This will allow you to quickly enter a serial number, RFID number or Reference number and view the asset information. From here you can then perform a new event or edit the asset. This will allow you to view the asset information and start an event even quicker than before.

√ **Better Layout of Icons**

With the addition of the Smart Search on the home screen we have re-arranged the icons. This layout works better on devices with smaller resolutions and provides a cleaner layout.

√ **View Components on an Asset**

When you look up an asset you will now see a new tab at the bottom called Components. This will show you any components that are attached onto the asset you are currently viewing. This is a good way to confirm the configuration of the asset before you start an event.

✓ View Schedule Information on an Asset

Similar to the Components tab the Schedules tab will show you all outstanding scheduled events for the asset.

✓ Mass Update Location

For employees and end users you can now mass update the location of multiple assets at once. Using this new interface you can simply use the smart search to compile a list of assets that you would like to update.

This will allow you to know exactly where assets are at any given time and provides the ability for the end users to update the location as they are using them.

Look for this by clicking on the Identify Icon from the main screen.

✓ Improved Handling of Photos

When using the camera on the mobile device some users experienced a problem when a large quantity of pictures were taken. We have improved the storage and uploading of photo's when using Field ID. You can now take as many photo's during an inspection as your device can store.

✓ Tune Downloading of Data

We have spent some time speeding up the downloading of data. We are always looking for new ways to improve the speed on the mobile. This is an on-going effort that we try and spend time on each release.
