## Release Date: November 29th,2009

N4 Systems is pleased to introduce Version 2009.8 of Field ID Web and 1.15 of Field ID Mobile.

Below you will read about the major improvements that we have made to Field ID in this release.  For an overview of all features please be sure to watch our recorded Webinar.

## Overview of New Features in Field ID Web 2009.8

### √ Filter By Product Type Group

On Assets, Reporting and Schedule you can now filter your results by Product Type Groups. This will allow you to see your results based on all Product Types that exist in the group that was filtered on.

### √ Mass Delete Scheduled Events

For those of you who have scheduled events in Field ID that you would like to remove you can now use mass update to delete these events. Simply click on Schedule from the top menu and generate your results. Click on Mass Update at the bottom and you will see a new option to remove all Incomplete Schedules.

### √ Sequence PDF Reports

On the Assets and Reporting screen when you Print All PDF Reports they will now be ordered in the same way they appear on the results screen.

For example, if you order your reporting results by Location and print all Inspection Reports they will be ordered by the Location. This will make it easier to group your reports for printing or storing.

### √ Product Comment Field Selectable on Assets Search

On the Asset Search selectable columns you can now select the Product Comment field. Just like all other fields this will appear in your Excel export if the results are exported.

## ✓ Three months now on Notification settings

Under Notification Settings you can now select to receive alerts 3 months in the future. This will help you plan for those larger jobs earlier.

## ✓ Mass Update to Publish Assets

If you have a group of assets that you would like to publish on the Safety Network you can now do this using mass update. Simply click on Assets from the top menu and generate your search results. Click on Mass Update at the bottom and you will see the option to either Publish or Do Not Publish all assets. If published your connections will then have the ability to register these assets seeing all important product and inspection information.

## ✓ Downloads Section

Under My Account you will now find a new Download section. In here you will now find all requested PDF and Excel downloads as well as Field ID Mobile software.

Each time you request a group of PDF reports or an Excel export you will be directed to the Downloads section. You will see the current status of your export and a link to download it once it's completed.

# Overview of New Features in Field ID Mobile 1.15

## ✓ New Real-Time Mode

If you use your mobile devices with an active Wi-Fi or Cellular connection Field ID Mobile now supports Real-Time Mode.

To enable Real-Time mode login to Field ID Mobile and select Menu > Preferences. You will see the option to enable Real-Time mode.

Once this is enabled when you look up an asset using the Smart Search it will fetch the information from the server providing you the newest asset and inspection information. With this there is no need to load Customer or Job Site information on the mobile.

## ✓ View Previous Inspection During a New Inspection

When your technicians or inspectors are completing a inspection on the mobile they will now be able to easily flip back to the previous inspection recorded to see the state of the checklist and copy any comments that were recorded.

On each inspection checklist section if the previous inspection is available to view you will see a new icon.  Click that and you will be taken to the previous results.
